

OVERVIEW

UseBullion is a non-custodial, terminal-grade command layer for gold (XAU/USD) trading bots. Operators connect any compliant bot, apply macro-aware risk controls, and monitor every decision with full audit trails.

HOW IT WORKS

- ▶ 1. Connect any compliant gold bot via API
- ▶ 2. Configure SL/TP, lot size, cycles, risk caps
- ▶ 3. Monitor live decisions and macro bias

KEY FEATURES

- ▶ Macro Intelligence: news + rates + COT + flows
- ▶ Composite bias engine with confidence scoring
- ▶ Server-side loss caps and event blackouts
- ▶ Real-time transparency panel for investors
- ▶ PWA — installable, offline-ready, push alerts
- ▶ OpenAPI import + contract health checks

RISK MANAGEMENT

- ▶ Non-custodial: capital stays in your broker
- ▶ Per-trade macro-bias veto with audit trail
- ▶ Daily & session loss caps enforced server-side
- ▶ News-event blackout windows
- ▶ Row-level security on every table
- ▶ Immutable decision ledger

PRICING (from)

- ▶ Operator — monthly / 20% off annual
- ▶ Investor — read-only transparency access
- ▶ Enterprise — custom SLAs and integrations

DISCLOSURES

UseBullion is a software layer, not a licensed advisor or fiduciary. Nothing here is financial advice. Leveraged XAU/USD trading carries substantial risk of loss. Past performance does not guarantee future results. Users are responsible for their own capital, broker selection, and jurisdictional compliance.
